

The project *Integrative flood risk governance approach for improved implementation of risk awareness*

- What is the relationship between true flood risk and the public's risk perception? What factors determine this?
- How can public participation in flood risk management be increased through better risk communication?
- How can participation in the establishment of FRM plans be encouraged and improved as a feature of FRM?
- What can institutions learn from improved understanding of risk communication approaches, tools and methods?
- How can risk be reduced by increased public awareness and participation? Which is the impact of this?

Main output of the IMRA project is the design of a risk governance approach, which aims at enhancing the

The elements of this risk governance approach that are relevant for risk management practice are comp
